

## EDITORIAL

10.1002/2017JA024313

## Key Points:

- The *JGR Space Physics* Editors thank all of the reviewers that helped us in 2016 for their service to the journal and the research community
- In 2016, 1602 scientists contributed 3997 reviews, up 6% and 12%, respectively, from the previous year
- In 2016, 1327 unique manuscripts were submitted to *JGR Space Physics*, up 16% from the previous year

**Abstract** The *Journal of Geophysical Research Space Physics* Editors wish to whole-heartedly thank the 1602 scientists that invested their time, expertise, and effort in service to the journal and the research community by conducting 3997 reviews in 2016.

### 1. Introduction

The *Journal of Geophysical Research Space Physics* Editors wish to whole-heartedly thank those people that served as manuscript reviewers in 2016. The journal could not exist without your investment of time and effort, lending your expertise to ensure that the papers published in this journal meet the standards that the research community expects for it. We sincerely appreciate all that you do, and we are very grateful for your willingness and readiness to serve in this role.

In 2016, we had 1602 people contribute reviews on *JGR Space Physics* manuscripts. This number is 6% higher than in 2015, indicating a healthy growth in the number of scientists and engineers supporting this journal. A total of 3997 reviews were completed during calendar year 2016, with 34 reviews straddling the end-of-year date change. There were, however, an additional 1198 people that were asked but did not submit a review in 2016 (18 of which had pending reviews at the year changeover). This yields an average reviews per person rate of 1.4, a number that increases to 2.4 among those that submitted a review for this journal in 2016. These values are identical to last year's averages. There were 228 people that did four or more reviews for *JGR Space Physics* in 2016, down nearly 20% from last year. Two other numbers worth noting are that our reviews take an average of 20.3 days from acceptance of a review request to its submission, with 65% of reports submitted by the 21 day deadline; both of these numbers are slightly better than they were in 2015.

Table 1 provides a summary of 2016 reviewer statistics for the journal. Note that these are numbers for calendar year 2016, so some of the numbers do not quite add exactly because of requests or reviews pending at the time of the 2015-to-2016 or 2016-to-2017 year change. Because of this carryover, the numbers do not sum exactly with each other on the table. The error is small, though, so we can still calculate some totals and averages.

The columns and rows of Table 1 are defined as follows. The column of the total statistics (fourth column) is the sum of two categories, also shown in the table: those that submitted at least one review in 2016 and those that did not. The column of averages (fifth column) is the fourth column value divided by the total count of all people asked to review (2800). Two of the row headings seem similar, "No response" and "Asked but not needed." The former means that the person did not answer yes or no to the request to review, and we eventually gave up trying to contact this person and moved on to other potential reviewers. The latter means that we had more requests sent out than reviewer slots needing to be filled and that others filled all available slots before this person answered either yes or no. The practice of sending out more requests than needed is common for initial submissions but rare for subsequent resubmissions. The row labeled "Requests excluding 'asked but not needed'" includes acceptances, declines, no response, and those requests still pending at the end of the year. This is a useful number to consider because the category "asked but not needed" exists because of our editorial practices, not necessarily because of any action or inaction by the potential reviewer. The two acceptance rates (bottom two rows) use the same numerator but different denominators, including and excluding the "asked but not needed" category.

**Table 1.** Reviewing Statistics for *JGR Space Physics* in 2016

	Did 1 or More	Did None	Total Count	Average per Person
People in category	1602	1198	2800	--
Total requests to review	6588	2244	8832	3.15
Declines	1029	932	1961	0.70
No response	186	289	475	0.17
Asked but not needed	1375	945	2320	0.83
Requests excluding "asked but not needed"	5213	1299	6512	2.33
Reviews completed	3997	0	3997	1.43
Reviews pending	16	18	34	0.01
Total acceptances <sup>a</sup>	4013	18	4031	1.44
Acceptance rate #1 <sup>b</sup>	60.9%	0.80%	45.6%	--
Acceptance rate #2 <sup>c</sup>	77.0%	1.39%	61.9%	--

<sup>a</sup>Total acceptances is the sum of "reviews completed" and "reviews pending."

<sup>b</sup>Acceptance rate #1 is calculated as "total acceptances" divided by "total requests to review."

<sup>c</sup>Acceptance rate #2 is calculated as "total acceptances" divided by "requests excluding 'asked but not needed'."

The total number of manuscripts reaching final decisions in 2016 was 1327. Of these, 1217 were sent out for review (92%). As of early April 2017, 76 are still under review or waiting for revision resubmission; i.e., 1251 reached final decision or were withdrawn. Of these, 811 were eventually accepted, yielding an acceptance rate of those reaching final decision of 65%. This percentage is very slightly lower than last year's value but probably within the noise of this calculation. The Editors made a combined total of 2757 decisions on manuscripts during calendar year 2016, across all categories of acceptance, revision, and rejection. This means that on average, a manuscript has 1.2 revision decisions before a final decision. This is identical to last year's value.

The *JGR Space Physics* Editors are continually amazed and pleased at the positive community response to our requests for reviews. We are keenly aware of how much time it takes to conduct a thorough review of a scientific manuscript, and we are truly thankful for your many hours of service to AGU in this otherwise rather anonymous and thankless task.

## 2. Referees for 2016

Table 2 provides a list of those that submitted at least one manuscript review in calendar year 2016. The names in italics are those that submitted four or more reviews in 2016. The count includes submissions of reviews on subsequent resubmissions of the same manuscript. This is straight from the Geophysical Electronic Manuscript Submissions (GEMS) site, and we did not attempt to merge duplicate entries. If you have multiple accounts and you were requested to and submitted reviews under more than one of them, then your name is listed twice in the list below.
